

Gunite Silver Lightweight Brake Drum

NEW! Gunite Silver Lightweight Brake Drum

Weight Savings vs. Standard Cast

We understand your need to manage total vehicle weight and operating cost while maximizing payload. We created the 99.5 lb. Silver brake drum to deliver the weight savings you need to increase payload and lower fuel consumption to achieve the lowest possible cost-per-mile. With its 12.5 lb. weight reduction per wheel end over full-cast drums – an 11% weight reduction – the Silver drum reduces a truck/trailer combination's total weight by 100 lbs. All this without sacrificing the quality and dependability customers count on from Gunite.

* Based on use in standard drive and trailer axle applications.

Introducing unparalleled performance, value and weight savings.

Gunite | 302 Peoples Avenue | Rockford, IL 61104-7092

Your only single source for industry-leading wheel end solutions.

STEEL & ALUMINUM WHEELS | DRUMS | HUBS | ROTORS | SLACK ADJUSTERS

Your only single source for industry-leading wheel end solutions.

Sure, other places can supply you with wheels or wheel end components. You pick from here, pull from there, but only one company manufactures and delivers the full range of components as a single source: **Accuride Wheel End Solutions.**

You get a partner that provides the broadest range of wheel end components in the industry. It's the quality you've come to trust from Accuride steel and aluminum wheels and Gunite® brand components in a complete, wheel end component package. There's no longer the need to spend the time coordinating purchases and delivery schedules with multiple suppliers. One order from one reliable source delivers one package full of industry-leading wheel end products. All backed by unmatched service and support. Ordering from Accuride Wheel End Solutions is simply more efficient and economical, saving you time and money.

Gunite Silver Lightweight Brake Drum

Gunite has been a technology leader in the development and manufacturing of brake drums for the heavy-duty trucking industry since 1924. Over its history, Gunite has become the standard by which the industry measures brake drum performance.

By continuing to develop new and better brake drum designs and manufacturing technologies, Gunite's engineers have helped the heavy-duty trucking industry improve brake performance and reduce operational costs. Now, Gunite has reached another milestone with this new lightweight, full-cast brake drum.

The all-new **Gunite Silver Lightweight Brake Drum (4000X)** utilizes engineered design enhancements and an advanced metallurgy to affordably achieve the weight savings you need without compromising the performance you expect. ***That's technology leadership.***

The Best Value

Provides an option for weight savings AND affordability that is positioned in the niche between our 9006X GOLD® lightweight premium drum and the 3600A®X full-cast standard drum.

Lightweight

With a weight of 99.5 lbs., the Silver drum achieves a 12.5 lb. weight reduction per wheel end when compared to a standard cast drum. The new Silver drum uses a high-strength gray iron with improved mechanical and structural material characteristics to create a lightweight alternative that saves you money while improving fuel economy.

Performance

Exceeds all Federal Motor Vehicle Safety Standard 121 (FMVSS) dynamometer test requirements along with Gunite's additional rigorous internal durability test standards.

Affordability

At 99.5 lbs. there is a weight savings of 11% over standard cast drums without the cost penalty that accompanies other weight-reduced lightweight premium drums. You receive performance you can depend on at an affordable price point.

100% Made in the USA

Gunite's manufacturing facility in Rockford, Illinois, is dedicated to producing Gunite-brand brake drums that are 100% cast and machined in the USA. We measure the proximity of our supply chain in feet, ***not continents.***

Quality Consistently

We continually monitor and control our foundry's metallurgy to achieve maximum consistency. Our drum machining centers incorporate the latest state-of-the-art technology – such as in-process quality checks of key characteristics – which translates into drums consistently produced to world-class quality standards. ***You can depend on it.***

Gunite's Silver Lightweight Brake Drum continues Gunite's heritage of performance. It delivers reduced weight at an affordable price point, all without compromising performance. That means dependable braking, built-in durability, effective heat dissipation, consistent quality, and longer life.

1 Uniform Heat Dissipation

The drum's consistent section thickness ensures uniform heat transfer performance

2 Brake Mounting Flange

Pocketed to contribute to overall weight reduction without compromising design integrity

3 Strength Without Compromise

Using state-of-the-art casting and structural simulation analysis tools and high-strength gray iron enables an optimum-thickness wraparound design for an efficient transition between the brake surface and mounting flange

4 Advanced Machining

State-of-the-art machining process ensures consistent quality and reliability

5 Performance You Can Count On

Achieves weight reduction without compromising the drum's strength, durability and performance

Interchange

Gunite's Silver Lightweight Brake Drum is interchangeable with competing drums. Access Gunite's cross-reference and interchange search at: accuridewheelendsolutions.com
