NO: WE2.033

Gunite Brand Automatic Slack Adjuster (ASA) Homologation Effective April 13, 2020

Accuride Wheel End Solutions is updating all welded 1.30" clevis pin spacing designs to include the Enhanced 2000 link. This change will improve the standard welded clevis design while reducing the number of components carried by the both Gunite and customers. This design alteration is fully reverse compatible with both existing standard 1.30" welded clevis designs as well as the 1.30" welded Enhanced 2000 designs.

With this change the Gunite Enhanced 2000 series of automatic slack adjusters will be obsolete. Once existing inventory is exhausted, any customers ordering AS21XX or SA21XXX series parts will receive the AS11XX or SA11XXX series equivalent. All links with 1.30" spacing will be black in color. Again, the new parts are fully reverse compatible and require no adjustment for application or installation on the users behalf.

Your Accuride sales representative will be working with you to make sure the replacement part numbers are communicated correctly to ensure a smooth transition. Thank you for your continued support.

Type	Obsolete	Replaced By
