

Aluminum Wheel Valve Stem Change

Effective May 2023, all Accuride aluminum wheel valve stems will now be TPMS-compatible. KIC aluminum wheels will remain unaffected.

Accuride is bringing added value to aluminum wheel customers at no additional cost. As of May 2023, Accuride aluminum wheels will be installed with valve-mounted TPMS compatible valve stems. Fit and form of the wheel and stem will remain unaffected, but the aluminum wheel will **GAIN** the function of supporting valve-mounted TPMS sensors. Valve position and access will remain unaffected.

Customers will not need to replace any existing valve stems in their wheels unless you would like to begin using valve-mounted TPMS sensors in all positions. Customers will also not have any issues with mixed valve stems in dual applications.

KIC aluminum wheels along with the 41644XP, 41362XP, and 40171 will not have compatible valve stems.

Thank you for your continued support of Accuride. If you have any questions, please contact your Accuride sales representative.
